

Quality Products from Hawkeye Industries Inc.

## Aqua -Buff® GlossMaster™ Polish

### Water-based polish for composites and other surfaces

#### Usage

To polish composite patterns, plugs, masters and product molds. Also to polish FRP parts, metals and painted surfaces.

#### Features

Aqua-Buff products are economical, easy to use and produce superior results.

Here's why you should choose Aqua-Buff® GlossMaster™ Polish—

**Swirl mark-free finish**—you'll achieve the ultimate shine finish.

**Easy application**—handy refillable squeeze bottle.

**Water-based**—environmentally friendly.

**Economical**—use only a small amount.

**Application**—Working on an area about 1' by 3', apply GlossMaster in three (3) quarter-size spots, each about foot apart, on the surface to be polished. Using a professional buffer, buff with a soft polishing pad (yellow cotton) or egg-crate foam polishing pad. While buffing, the surface should look wet. If not, add more GlossMaster. Buffing speeds will vary depending on individual styles, but some users find that speeds of 2200-2400 rpm work well. Polish until the haze is eliminated, and you have a smooth, glossy finish free of swirl marks.
